

# **ACCESS Lavatory**

**World's first expandable lavatory for  
passengers with reduced mobility (PRM)**

# ACCESS Lavatory

The U.S. Department of Transportation has issued a notice of proposed rulemaking to address accessible lavatories on single-aisle aircraft. ACCESS lavatory expansion module can be readily deployed or stowed, with the lavatory usable in both positions.

## 40% More Space

*Additional space is created through the use of a moving wall to offer PRMs a space 40% larger than a typical lavatory.*

## No Seat Loss

*No alteration to cabin layout or reduction in galley space and seating capacity.*

## Assisted Transfer

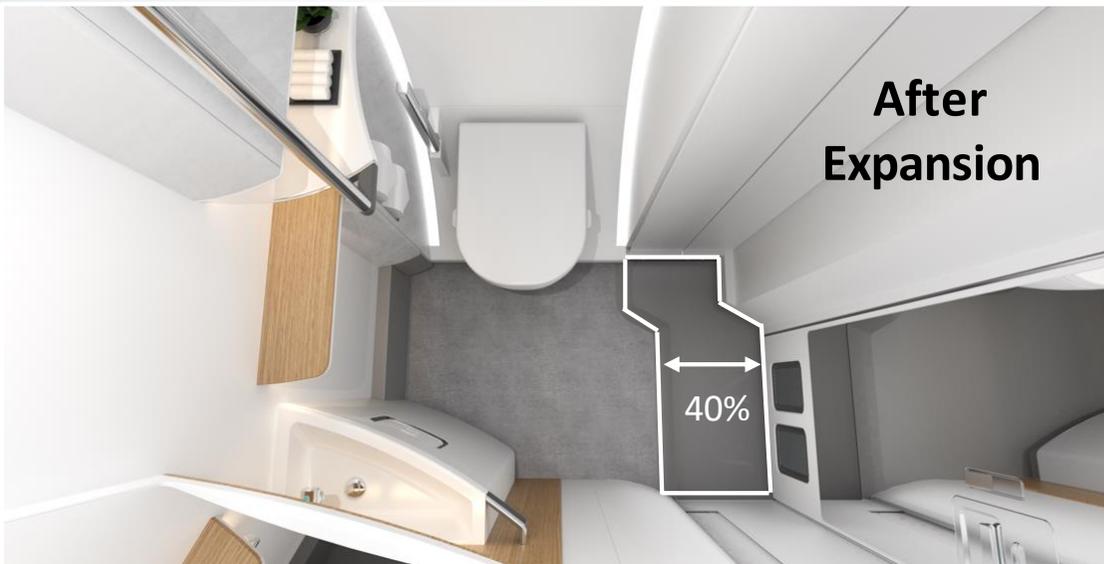

*Lavatory footprint is large enough to allow a passenger in a wheelchair and a caregiver to enter and use the facilities with comfort and privacy.*

## Proven Design

*Patented design has been validated by PRMs through numerous trials during conceptualisation and design phase.*
